

MeTree® is an easy to use software that is patient-facing web-based family and personal health history collection and clinical decision support program.

*Educates you about what to collect and how to collect Family Health History from your family members.

*You may log in and out to collect more information as often as needed.

*Provides simple straightforward action-oriented recommendations tailored to you—the patient.

*Engages you in your care and encourages you to participate in your health.

What is Family Health History?

Family health history is information about diseases that run in your family, as well as the eating habits, activities, and environments that your family shares. Knowing family health history can not only help you make healthy lifestyle choices, but also help you and your doctor choose screening and disease prevention options that are most appropriate for your risk level.

Your family's health is one part of the history of your family. While collecting your family health history, pay attention to events, stories, and experiences as well. Gathering your family history helps you share your family stories and health information with your family members and children.

“Knowing your family health history could save your life.”

Francis Collins, MD, PhD

Former director of the National Human Genome Research Institute (NHGRI) at the National Institutes of Health (NIH).
