

| Drug           | Gene(s)/Level of evidence                          | Guidelines/Supporting Studies*   | FDA Label Information   | Additional Information/Commentsxc`   |
|----------------|--|--|---|--|
| Haloperidol    | CYP2D6 (3)<br>SLC6A5 (3)                           | 2D6: DPWG guidelines <ul style="list-style-type: none"> <li>Reduce dose by 50% in PMs</li> </ul>   | --  |  |
| Aripiprazole   | CYP2D6 (3)   | 2D6: DPWG guidelines <ul style="list-style-type: none"> <li>Reduce maximum dose to 10 mg/day (67% of max recommended daily dose).</li> </ul> | 2D6 FDA label: Decrease dose by half in 2D6 PMs; decrease to one-quarter of usual dose in 2D6 PMs who are taking a 3A4 inhibitor (Dosage and Administration)  |  |
| Risperidone    | CYP2D6 (2A, 3)<br>HTR2C (3)<br>HTR2A (3)           | 2D6: DPWG guidelines <ul style="list-style-type: none"> <li>Insufficient data to allow dosage adjustment</li> </ul>                          | 2D6 FDA label: Although 2D6 EMs have lower risperidone and higher 9-hydroxyrisperidone concentrations than PMs, PK of risperidone and 9-hydroxyrisperidone combined, after single and multiple doses, are similar in EMs PMs. (Clinical Pharmacology) |  |
| Paliperidone   |  | --   | --  | A few small studies show that genotype MCR4 AA linked to increase risks of weight gain<br><br>Gene not included on clinical panels   |
| Ziprasidone    |  | --   | --  | CYP3A4 is the major CYP contributing to the oxidative metabolism of ziprasidone. CYP1A2 may contribute to a much lesser extent. Based on in vivo abundance of excretory metabolites, less than one-third of ziprasidone metabolic clearance is mediated by cytochrome P450 catalyzed oxidation and approximately two-thirds via reduction by aldehyde oxidase. |
| Clozapine      | HTR2C (2B)<br>MTHFR (3)<br>HTR3A (3)<br>CYP1A2 (3) | 2D6: DPWG <ul style="list-style-type: none"> <li>no recommendations for dose change</li> </ul>   | Dose reduction may be necessary in patients who are CYP2D6 poor metabolizers. Clozapine concentrations may be increased in these patients. (Dosage and administration, use in specific populations)   |  |
| Fluphenazine   | CYP1A2 (3)   | --   | --  | 2 small studies: Genotypes CC + AC are associated with increased QT interval when treated with chlorpromazine in people with Schizophrenia as compared to genotype AA  |
| Chlorpromazine | CYP1A2 (3)   | --   | --  | 2 small studies: Genotypes CC + AC are associated with increased QT interval when  |

|   |  |   |   |  |
|---|--|---|---|--|
|   |  |   |   | treated with chlorpromazine in people with Schizophrenia as compared to genotype AA.                               |
| Iloperidone   | CYP2D6 (3)   | --  | FANAPT dose should be reduced by one-half for poor metabolizers of CYP2D6 (dosage and administration)   |  |
| Olanzapine  |  | 2D6: DPWG <ul style="list-style-type: none"> <li>no dosing recommendations for olanzapine based on CYP2D6 genotype.</li> </ul>  |   |  |
| Perphenazine  | --   | --  | CYP2D6 is involved in the pharmacokinetics of perphenazine. Poor metabolizers demonstrate higher plasma concentrations of antipsychotic drugs at usual doses, which may correlate with emergence of side effects. Prospective phenotyping of elderly patients prior to antipsychotic treatment may identify those at risk for adverse events. (clinical pharmacology) | No studies on PharmGKB with 2D6; 2 lower level clinical annotations with RGS4 (level 3)                            |
| Quetiapine  | CYP3A5 (3)<br>SLC6A4 (3)   | --  | --  | --   |
| Thioridazine  | CYP1A2 (3)<br>CYP2D6 (3)   | --  | Contraindicated in CYP2D6 PMs (contraindications, warnings, and precautions)  | Small study (n = 61) patients showed variability in thioridazine: mesoridazine ratio in different CYP2D6 genotypes |
| <i>*Asenapine, lurasidone, thiothixene are included in the GeneSight panel but do not have clinically relevant data per PharmGKB.</i> |  |   |   |  |
| <b>Antidepressants</b>  |  |   |   |  |
| Citalopram  | CYP2C19 (1A)<br>SLC6A4 (2A)<br>HTR2A (2B)<br>CYP2D6 (3)          | 2C19: DPWG, CPIC Guideline provides dose recommendations <ul style="list-style-type: none"> <li><u>CPIC</u></li> <li>UM: Consider alt drug</li> <li>EM, IM: No change</li> <li>PM: Consider alt drug or consider 50% dose reduction</li> <li><u>DPWG:</u></li> <li>UM: Titrate to max of 150% of normal dose or select alt drug</li> <li>PM, IM: No recommendation</li> </ul> | 2C19 FDA label: 20 mg/day is the maximum recommended dose in PMs (Dosage and Administration)  |  |
| Escitalopram  | CYP2C19 (1A, 2A, 3)<br>SLC6A4 (2A, 3)<br>CYP2D6 (3)<br>HTR2A (3) | 2C19: DPWG, CPIC Guideline provides dose recommendations <ul style="list-style-type: none"> <li><u>CPIC</u></li> <li>UM: Consider alt drug</li> <li>EM, IM: No change</li> </ul>  | --  |  |

|              |  |   |   |  |
|--------------|--|---|---|--|
|              |  | <ul style="list-style-type: none"> <li>PM: Consider alt drug or consider 25-50% dose reduction</li> </ul>   |   |  |
| Duloxetine   | --                                       | 2D6: DPWG guideline provides no dosing recommendations. No evidence for IM and UM. PM has non-statistically significant clinical effect.  | --  |  |
| Fluoxetine   | CYP2D6 (3)<br>SLC6A4 (3, 4)<br>HTR1A (3) | 2D6 & 2C19: CPIC guideline states lack of data and provides no recommendations.   | <p>2D6 FDA Label: Fluoxetine inhibits the activity of CYP2D6, and may make individuals with normal CYP2D6 metabolic activity resemble a poor metabolizer. Coadministration of fluoxetine with other drugs that are metabolized by CYP2D6, including certain antidepressants (e.g., TCAs), antipsychotics (e.g., phenothiazines and most atypicals), and antiarrhythmics (e.g., propafenone, flecainide, and others) should be approached with caution.</p> <p>Prescribing information states caution is warranted in situations that may prolong QT such as “conditions that predispose to increase fluoxetine exposure (overdose, hepatic impairment, use of CYP2D6 inhibitors, CYP2D6 poor metabolizer status, ...”</p> |  |
| Mirtazapine  | CYP2D6 (2A)<br>SLC6A4 (3)<br>CYP2B6 (3)  | 2D6: DPWG guideline provide no dose recommendations   | --  |  |
| Vortioxetine | CYP2D6 (3)                               | --  | 2D6 FDA Label: Maximum recommended dose in patients who are known CYP2D6 poor metabolizers is 10 mg/day.  |  |
| Atomoxetine  | CYP2D6 (2A)<br>SLC6A2 (3)                | <p>2D6: DPWG Guideline</p> <ul style="list-style-type: none"> <li>PMs: Dose increase probably not necessary; be alert to ADEs.</li> <li>UMs: Be alert to reduced efficacy or select alternative drug (e.g., methylphenidate, clonidine).</li> </ul> | 2D6 FDA label: Dosing adjustment is recommended in patients known to be poor CYP2D6 metabolizers (Dosage and Administration; Warnings and Precautions; Clinical Pharmacology).  |  |

|            |              |    |   |  |
|------------|--------------|----|---|--|
| Diazepam   | CYP2C19 (3)  | -- | 2C19, 3A4: FDA label: The marked inter-individual variability in clearance of diazepam reported in the literature is probably attributable to variability of CYP2C19 and CYP3A4 (Clinical Pharmacology) | Single study of 63 asian patients showed that CYP2C19 *2 + *3 is associated with decreased metabolism of diazepam as compared to CYP2C19 *1. |
| Lorazepam  |              | -- | --  | Small study of 14 Asian patients with UGT2B7 (evidence level 3)  |
| Oxazepam   | UGT2B15 (2B) | -- | --  |  |
| Alprazolam | --           | -- | --  |  |
| Clonazepam | --           | -- | --  |  |

CPIC = Clinical Pharmacogenetics Implementation Consortium; DPWG = Dutch Pharmacogenetics Working Group

\*See accompanying for PharmGKB Levels of Evidence definitions and a complete listing of CPIC guidelines

### PharmGKB Levels of Evidence Definitions

| Evidence Level | Definition  |
|----------------|---|
| 1A             | Annotation for a variant-drug combination in a CPIC or medical society-endorsed PGx guideline, or implemented at a PGRN site or in another major health system.   |
| 1B             | Annotation for a variant-drug combination where the preponderance of evidence shows an association. The association must be replicated in more than one cohort with significant p-values, and preferably will have a strong effect size.                      |
| 2A             | Annotation for a variant-drug combination that qualifies for level 2B where the variant is within a VIP (Very Important Pharmacogene) as defined by PharmGKB. The variants in level 2A are in known pharmacogenes, so functional significance is more likely. |
| 2B             | Annotation for a variant-drug combination with moderate evidence of an association. The association must be replicated but there may be some studies that do not show statistical significance, and/or the effect size may be small.                          |
| 3              | Annotation for a variant-drug combination based on a single significant (not yet replicated) or annotation for a variant-drug combination evaluated in multiple studies but lacking clear evidence of an association.   |
| 4              | Annotation based on a case report, non-significant study or in vitro, molecular or functional assay evidence only.  |

### Available CPIC Guidelines

| Drug   | Gene            |
|--|-----------------|
| Clopidogrel  | CYP2C19         |
| Amitriptyline, clomipramine, desipramine, doxepin, imipramine, nortriptyline, trimipramine | CYP2C19, CYP2D6 |
| Citalopram, Escitalopram, Fluoxetine, Fluvoxamine, Paroxetine, Sertraline                  | CYP2C19, CYP2D6 |

|   |                |
|---|----------------|
| Codeine   | CYP2D6         |
| Phenytoin   | CYP2C9, HLA-B  |
| Warfarin  | CYP2C9, VKORC1 |
| Ivacaftor   | CFTR           |
| Capecitabine, 5-FU, tegafur                       | DPYD           |
| Rasburicase                                       | G6PD           |
| Abacavir  | HLA-B          |
| Allopurinol                                       | HLA-B          |
| Carbamazepine                                     | HLA-B          |
| Azathioprine, 6-MP, thioguanine                   | TPMT           |
| Boceprevir, peg-interferon, ribavirin, telaprevir | IFNL3          |
| Simvastatin                                       | SLCO1B1        |
